

CBRN Undergarment

Description

The CBRN protective undergarment is an economical alternative to CBRN protective garments. It is made of a filtering layer identical to the one found in CBRN protective suits: a knit composition of activated carbon fibers bonded on each side to comfort liners. The CBRN undergarment and socks provides protection against vapour toxic agents such as VX or Mustard. Protection against liquid toxics is provided the by the outer garment/boots.

Performance of the Suit

- Lightweight
- High air permeability
- Compliant with NATO standard
- Up to 24 hours protection against vapour CWA
- Washable up to 10 times
- 30 days continuous use
- 10-year shelf life
- Weight = 0,535 kg (L size)

KNITTED ACTIVATED CARBON FILTER (KAC)

Filtering complex made of Knitted Activated Carbon fibers laminated on both side with a comfort lining
